

The Mountain

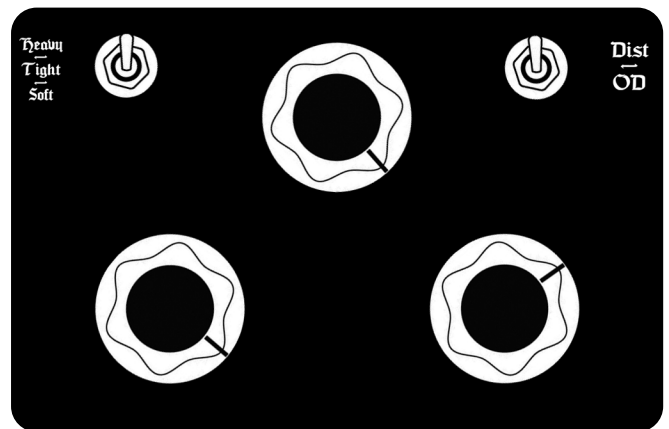

AUDICORY SIGNAL DISRUPTOR

The Mountain is a highly tuned OD/Dist/Fuzz circuit built for Sustain and Heaviness. The right toggle switches between Distortion and OD mode for when your using a clean amp or a distorted amp. The left toggle cycles through the clipping modes. 1st is a soft but still gainy, middle is heavier and the last is a huge and massive. The tone stack is adjusted so when you rotate it counter clockwise and on the last setting it gets a huge compressed Fuzz sound.

Tight and Cutting

Massive and Fuzzy

Thick and Smooth
